

Anchana Prabakaran

Databricks Certified Data Engineer Associate

Data Analyst | Databricks | SSRS | Power BI | Python | SQL Server

anchana.techie@gmail.com • Anchana Prabakaran • Chennai

PROFESSIONAL SUMMARY

Detail-oriented Data Analyst with 2+ years of experience in data migration, report development, and ETL pipeline engineering. Proven expertise in SSRS-to-Databricks migration at scale, Power BI dashboard development, and data validation using Python. Certified Databricks Data Engineer Associate with hands-on experience in Azure DevOps and DBT deployments.

TECHNICAL SKILLS

Data Platforms

Databricks, SQL Server, Azure DevOps

Reporting Tools

SSRS (SQL Server Reporting Services), Power BI

Languages

Python, T-SQL, DAX

ETL & Pipelines

DBT (Data Build Tool), ETL Transformations

Integration

ODBC, Simba Spark Driver, Personal Access Tokens (PAT)

Cloud & DevOps

Azure DevOps

WORK EXPERIENCE

Data Analyst

October 2023 – Present (2 Year 5 Months+)

Project 1: Power BI Dashboard Development

- Designed and delivered multiple Power BI dashboards — Portfolio at Risk, Agent Productivity, Claims, and Insurance — for business stakeholders.
- Developed DAX measures and data models to support dynamic reporting and KPI tracking.
- Collaborated with business teams to gather requirements and translate them into actionable visual analytics.

Project 2: SSRS-to-Databricks Migration (200–400 Reports)

- Played a key role in the end-to-end migration of 200–400 SSRS reports from SQL Server to Databricks, converting embedded T-SQL to Databricks-compatible SQL.
- Automated extraction of table references and T-SQL queries from .rdl files using Python scripting, significantly reducing manual effort.
- Configured ODBC connectivity via Simba Spark Driver and Databricks Personal Access Tokens to repoint reports to the new platform.
- Performed thorough validation of query outputs between SQL Server and Databricks, classifying discrepancies as data sync or logic issues.
- Investigated and resolved query-level discrepancies, ensuring data accuracy and consistency postmigration.

Project 3: ETL Pipeline Development & DBT Deployment on Azure DevOps

- Converted existing T-SQL stored procedures into DBT models for Databricks, restructuring transformation logic to process and structure raw data for downstream consumption.
- Rebuilt the remaining stored procedures as Databricks notebooks and deployed both the DBT models and notebooks through Azure DevOps CI/CD pipelines, maintaining full version control in the repository.
- Authored Terraform configuration to provision and schedule the corresponding job in Databricks.

CERTIFICATIONS

Certification	Issued	Valid Until
Databricks Certified Data Engineer Associate	June 1, 2026	June 1, 2028

EDUCATION

Bachelor of Engineering – Computer Science & Engineering

Meenakshi Sundararajan Engineering College

First Class with Distinction

CGPA: 8.84
